

Get connected!

Building networks for future forests.

EarthBird and Sky demonstrated how important it is to build networks. And they would certainly say that NOW is the time for you to start.

Sky's adventure ended - she went around the world, she learned about the benefits forests provide and about the problems they have. Think of all the friends she made on her tours of forests and cities and all the things she was able to share. You must know so many things which you could share with others, maybe even someone far away who lives a totally different life.

1 What is Networking?

Networking means people share ideas with each other as they work toward a common purpose. For EarthBird and Sky - and for you too - networking means that young people anywhere can work together to make sure that the Earth's forests are healthy for the future.

8 Keep Going!

Don't stop networking. Keep sharing ideas as you grow and experience new things.

7 How to Start?

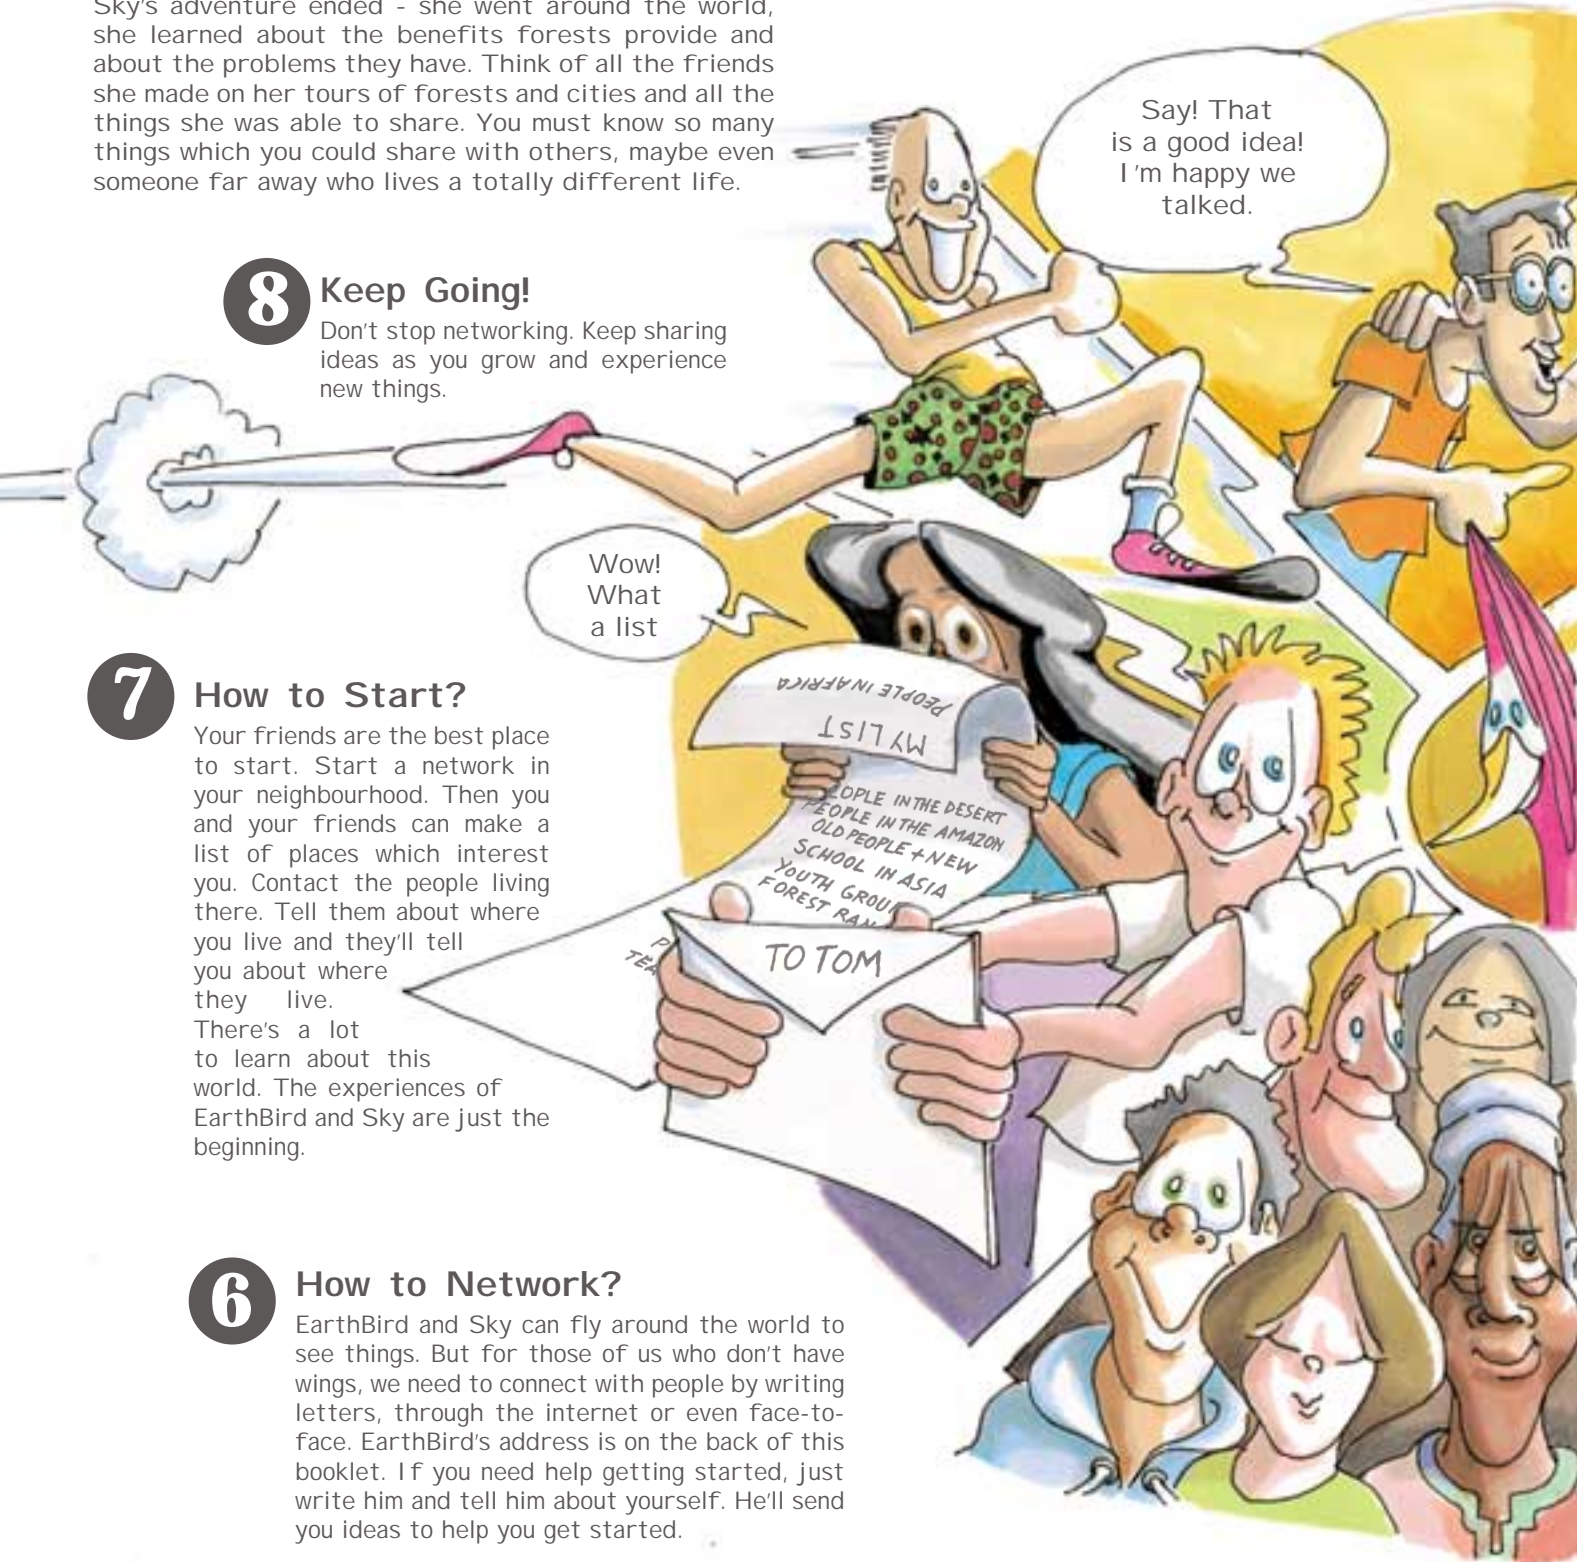

Your friends are the best place to start. Start a network in your neighbourhood. Then you and your friends can make a list of places which interest you. Contact the people living there. Tell them about where you live and they'll tell you about where they live. There's a lot to learn about this world. The experiences of EarthBird and Sky are just the beginning.

6 How to Network?

EarthBird and Sky can fly around the world to see things. But for those of us who don't have wings, we need to connect with people by writing letters, through the internet or even face-to-face. EarthBird's address is on the back of this booklet. If you need help getting started, just write him and tell him about yourself. He'll send you ideas to help you get started.

5 Who should Network?

You should network! Wherever you are, action is needed - whether you live on a farm or in a city apartment. All of you have information and great ideas and you should share what you know.

2 Why Network?

It's always fun to make new friends, but think about making friends and helping your community and the world at the same time. You can help other people by sharing your ideas with them and they can help you by giving you their ideas. And our environment is the winner.

We are networking now!

Networking is good for me and my friends.

It's time!

3 When to Network?

The forest needs your help now. The sooner you get started, the more people you'll be able to connect with and the more you'll be able to help.

Tick!

Tick!

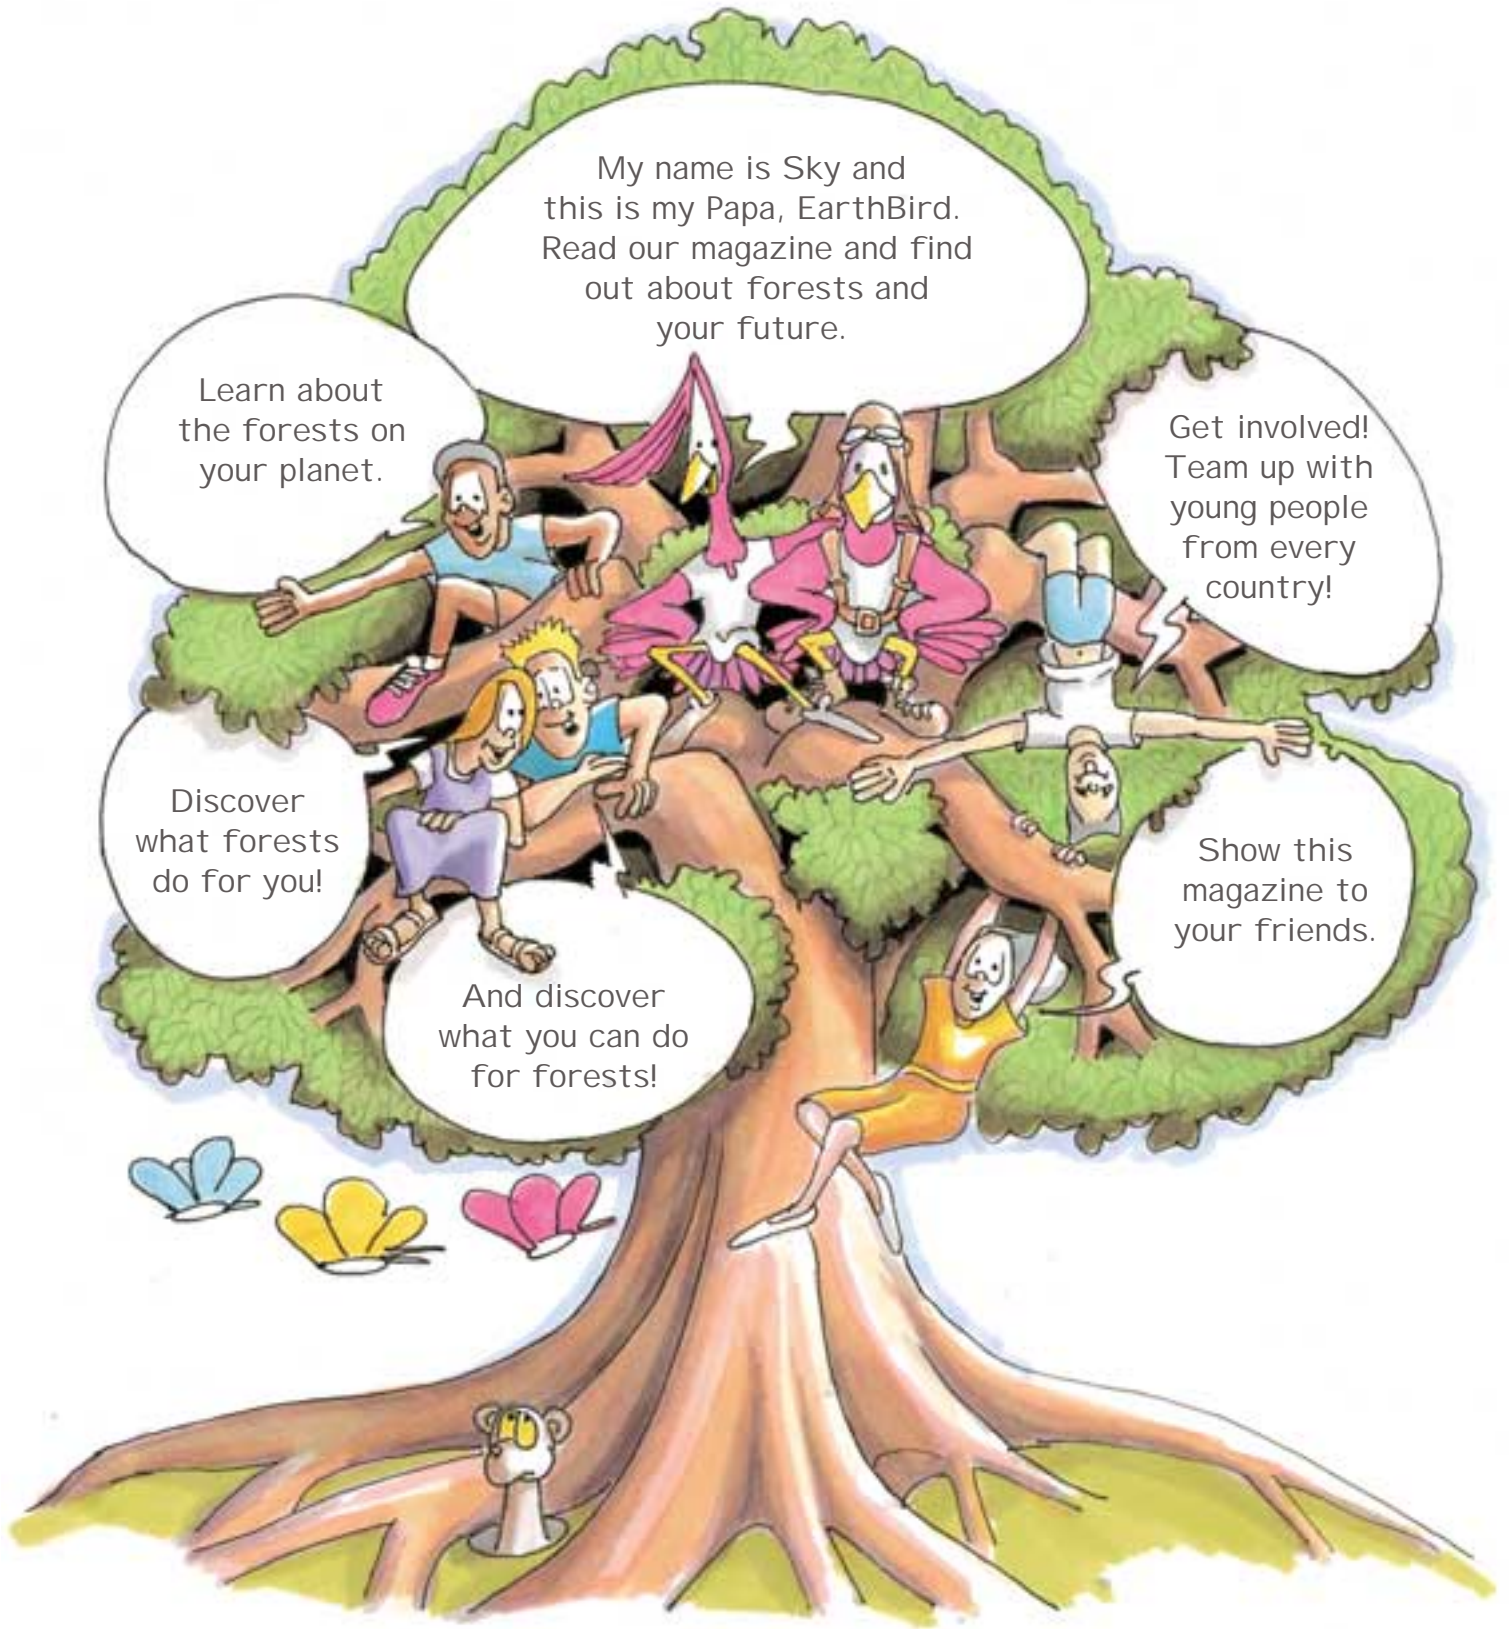

Tock!

Tick!

Tock!

4 Where to Network?

Everywhere! Start where you live, look at your neighbourhood, your school, find out about projects in your country and around the world. Getting connected is important, even if you don't live near a forest.
